Architectural Work Pinnacle of Our Trade

FAMILY DAY AT THE BALLPARK

Job of the Month

San Jose City College

The work being done by Local 104 members at Air Systems, Inc., in San Jose, exemplifies a perfectionism and quality of architectural work that sets the standard for the industry.

This job also represents the power of our vote. The San Jose City College job was funded by Measure I, which passed by 74% in November of 1998—five and a half years ago—in the amount of \$135.75 million, and which is still producing hours for our members today!

Vote today—work tomorrow!

Representing Air Systems, Inc. and Local 104 are: Foreman John Wear, Superintendent Ray Burns, Local 104 Business Representative Mark Van Den Heuvel, Lead Man Randy Sizelove, Rudy Contreras, and Abraham Arango.

The 21,000 square feet barreled metal-roof, manufactured by AEP SPAN, was made-up of double-lock standing seam 24-gauge, colored Galvalume. The job value was over \$280,000, and produced over 2,500 combined shop and field hours for Local 104 members.

The expansion joints (pictured left) installed between the windows and the walls by Air Systems consisted of over 900 linear feet and were manufactured by Balco Metalines. Both soft and hard covers were installed. Marelich Mechanical, Inc., ran the HVAC on the job.
